RECOMMENDATION FINAL REPORT STRUCTURE

1. INTRODUCTION

This exercise reviews the paper-trading records and chart screenshots for Bitcoin and Ethereum. The purpose is to analyse the trade results, identify good and poor trading decisions, and understand areas for improvement. The analysis uses candlestick charts, SMA, RSI, and support and resistance levels.

2. GOOD TRADE EVALUATION

The Ethereum trade was closed at a higher price than its entry price, resulting in a profit. The entry price was $2,659.10, and the exit price was $2,671.80. This shows a favourable price movement. However, recording the entry reason, confirmation signals, stop-loss, and target would help evaluate the quality of the trading decision.

3. POOR TRADE EVALUATION

The Ethereum trade on Kraken resulted in a loss because the entry price was $2,689.59 and the exit price was $2,511.31. The chart shows a downward price movement during the trade. This highlights the importance of checking the trend, observing candlesticks, and setting a stop-loss before entering a trade.

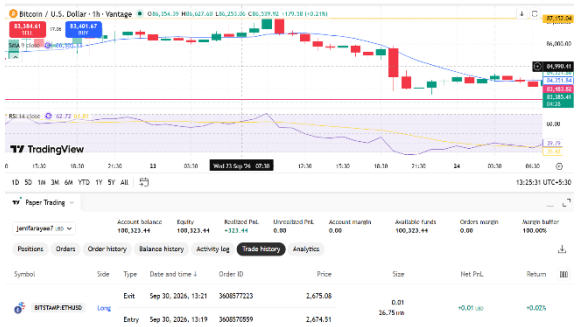

4. FOCUSED TRADING REPORT

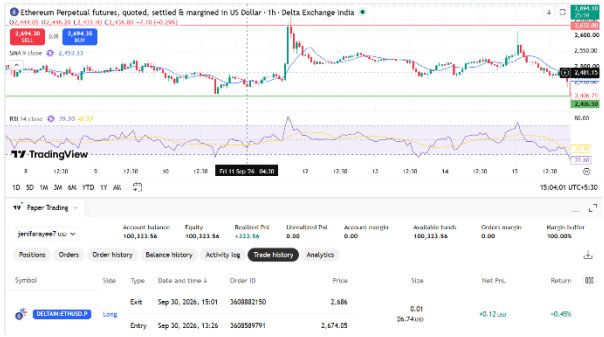

The visible trading records include Bitcoin and Ethereum trades. Some trades produced profits, while others resulted in losses. The screenshots show the importance of using SMA, RSI, candlestick patterns, and support and resistance levels to analyse market movements. Recording the entry price, exit price, and profit or loss for every trade will help measure overall performance accurately.

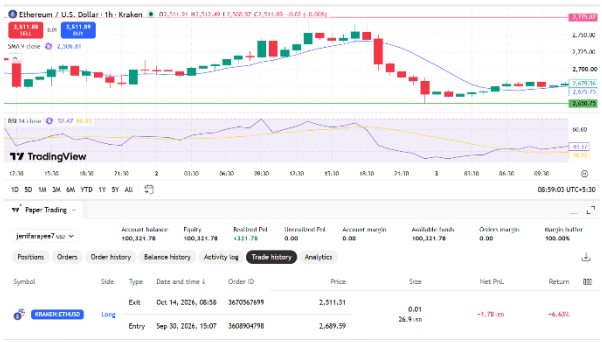

5. OVERALL REFLECTION

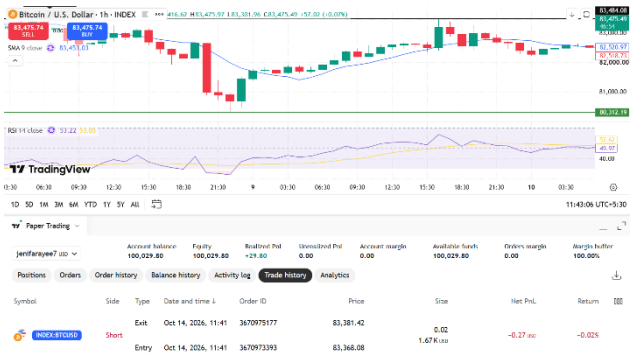

This exercise helped me understand the importance of patience, proper entry timing, and risk management. I learned that I should observe more candles and wait for confirmation before entering a trade. In future, I will record the entry reason, confirmation signals, stop-loss, target, position size, fees, and final result. This will help me avoid repeated mistakes and improve my trading decisions.
